

HW#9 1.10 8, 12, 16, 20, 24, 32, 36, 48, 66, 72

8) $P(1, 2), Q(3, 3)$

$$m = \frac{y_2 - y_1}{x_2 - x_1} = \frac{3 - 2}{3 - 1} = \frac{1}{2}$$

Math 161

- Allman

Thanks!

12) $P(-1, -4), Q(6, 0)$

$$m = \frac{0 - (-4)}{6 - (-1)} = \frac{4}{7}$$

- Kaylee

$P(-2, 0), Q(0, 4)$

$$m = \frac{4 - 0}{0 - (-2)} = \frac{4}{2} = 2$$

b = y-intercept is 4 so...

$$y = mx + b$$

$$y = (2)x + (4)$$

$$\boxed{y = 2x + 4} \text{ or } 0 = 2x + 4 - y$$

20) Find line that goes through $(-2, 4)$ with slope $= -1$

using the equation $y - y_1 = m(x - x_1)$ we get...

$$y - 4 = (-1)(x - (-2))$$

$$y = -x - 2 + 4$$

$$\Rightarrow \boxed{0 = x + 2 - y}$$

24) Find line that goes through $(-1, -2)$ and $(4, 3)$

$$\text{slope} = m = \frac{3 - (-2)}{4 - (-1)} = \frac{5}{5} = 1 \text{ so,}$$

$$y - y_1 = m(x - x_1)$$

$$y - (-2) = (1)(x - (-1))$$

$$\Rightarrow y = x + 1 - 2 \Rightarrow \boxed{0 = x - 1 - y}$$

32) Find line that has y-intercept = 6 and parallel to $2x + 3y + 4 = 0$

$$4 + 2x + 3y = 0 \Rightarrow 3y = -2x - 4 \Rightarrow y = -\frac{2}{3}x - \frac{4}{3}$$

so slope is $= -\frac{2}{3}$

$$\text{using } y = mx + b \Rightarrow \boxed{y = -\frac{2}{3}x + 6}$$

36, 48, 66, 72

36) Find equation of Line that passes through $(\frac{1}{2}, -\frac{2}{3})$, perpendicular to $4x - 8y = 1$

① Find slope of $4x - 8y = 1$

$$-8y = -4x + 1$$

$$y = \frac{1}{2}x - \frac{1}{8} \quad \text{slope} = \frac{1}{2}$$

② Find reciprocal of $\frac{1}{2}$ to find our slope.

$$m = -\frac{1}{\frac{1}{2}} = -2$$

③ Find Equation

$$y - y_1 = m(x - x_1)$$

$$y - (-\frac{2}{3}) = -2(x - \frac{1}{2})$$

$$y = -2x + 1 - \frac{2}{3} \Rightarrow \boxed{y = -2x + \frac{1}{3}}$$

48) $2x - 5y = 0$

$$-5y = -2x \Rightarrow y = \frac{2}{5}x$$

$$\text{slope} = m = \frac{2}{5}$$

$$y\text{-intercept} = b = 0$$

66) $T = 0.02t + 15.0$ $t = \text{years since 1950}$

a) the slope represents the increase in average surface temp. in $^{\circ}\text{C}$ per year.
The T-intercept is the average surface Temp. in 1950, or 15°C .

b) in 2050

$$t = 2050 - 1950$$

$$= 100$$

so...

$$T = 0.02(100) + 15 = \boxed{17^{\circ}\text{C}}$$

72) Using t in place of x and V in place of y .

a) Find slope using $(0, 4000) + (4, 200)$

$$m = \frac{200 - 4000}{4 - 0} = \frac{-3800}{4} = -950$$

$$\text{Using } V\text{-intercept, the equation is } \boxed{V = -950t + 4000}$$

c) the slope represents the rate of depreciation of the computer, and V-intercept is the cost.

d) when $t = 3$, the value of the computer is

$$V = -950(3) + 4000$$

$$= \boxed{1150}$$
