

REPEAT until only 3 groups remain in table. Use 3-point formula to finish \rightarrow the Neighbor-Joining tree.

Example: (Also illustrates that NJ recovers true tree from tree metric dissimilarity data.)

	a	b	c	d	
a		2.1	4.1	2.2	Known data
b			2.2	.3	
c				2.1	
d					

$$R_a = 8.4$$

$$R_c = 8.4$$

$$N-2 = 2$$

$$R_b = 4.6$$

$$R_d = 4.6$$

$$M_{ab} = 2d_{ab} - R_a - R_b = 2(2.1) - 8.4 - 4.6 = -8.8 \quad *$$

$$M_{ac} = 2d_{ac} - R_a - R_c = 2(4.1) - 8.4 - 8.4 = -8.6$$

$$M_{ad} = 2d_{ad} - R_a - R_d = 2(2.2) - 8.4 - 4.6 = -8.6$$

* = minime!

$$M_{bc} = 2d_{bc} - R_b - R_c = 2(2.2) - 4.6 - 8.4 = -4.8$$

$$M_{bd} = 2d_{bd} - R_b - R_d = 2(.3) - 4.6 - 4.6 = -8.6$$

$$M_{cd} = 2d_{cd} - R_c - R_d = 2(2.1) - 8.4 - 4.6 = -8.8 \quad *$$

Join a, b:

	a	b	cd
a		2.1	3.15
b			1.25

$$x = d(a, v) = \frac{1}{2} (d(a, cd) + d(a, b) - d(b, cd))$$

$$= \frac{1}{2} (3.15 + 2.1 - 1.25) = \frac{1}{2} = 2!$$

Step 2: Compute $d(v, c)$, $d(v, d)$

	a	b	c
a		2.1	4.1
b			2.2

$$d(v, c) = 2.1$$

	a	b	d
a		2.1	2.2
b			.3

$$d(v, d) = .2$$

New Table:

	v	c	d
v		2.1	.2
c			2.1

only 3 groups! \Rightarrow end in sight

Attach at v:

NT tree = true tree!
